Description of Property and Eligibility Determination

This structure is a standard concrete slab, with eleven-foot span, which has been repaired with new parapet.

We have determined that this structure lacks the requisite integrity as well as a sufficient degree of intact character-defining characteristics to be considered eligible for inclusion in the National Register as a type of a steel beam small structure. It has been widened with a concrete slab and has a sixteen-foot span. We have determined that this structure lacks the requisite integrity as well as a sufficient degree of intact character-defining characteristics to be considered eligible for inclusion in the National Register as a type of steel beam structure, given its current hybrid nature. To be considered for listing, according to the Small Structures on Maryland's Roads, Historic Context Report (p. 4-15) metal beam small structures should retain longitudinal beams, abutments and railings as primary character defining elements of the substructure. This structure lacks a metal railing and is a hybrid structure. These changes have compromised the integrity of the structure.
